Developmental Origins of Health and Disease (DOHaD): Early Life Adversity and Later Life Reversibility

Preconference at the American Psychosomatic Society Annual Meeting
March 6, 2019
8:30am – 4:45pm
Vancouver, Canada

Organized by the NIA/ESRC/BBSRC Interdisciplinary Research Network on Early Adversity & Later Life Reversibility.

For more information and to register for the preconference, visit the APS Annual Meeting and Network on Reversibility websites.
Are you interested in incorporating measures of neurocognitive function into your research?

Neurocognitive function is becoming increasingly important in understanding chronic lifestyle diseases. Many funding agencies are supporting initiatives related to cognition in health (e.g., The BRAIN Initiative). This workshop will provide the audience with information about tools for measuring neurocognitive function, using different brain or cognitive function modalities (e.g., EEG, fMRI, fNIRS, rTMS, electronic neuropsychological tests, etc.). Content is relevant for attendees at all career levels, from graduate students to senior scientists and clinicians.

Visit [www.psychosomatic.org](http://www.psychosomatic.org) for more information.
